Operations

Alliance with NWS:

Embedded NWS HQ Personnel

OS&T/MDL (Stumpf)

OS&T/NPI (Cate, Hall)

OCWWS (Ferree, Scharfenberg)

Warning Technology Workshops

Email Lists, BB Forums, Surveys

Background

Storm Cell Identification and Tracking (SCIT) algorithm

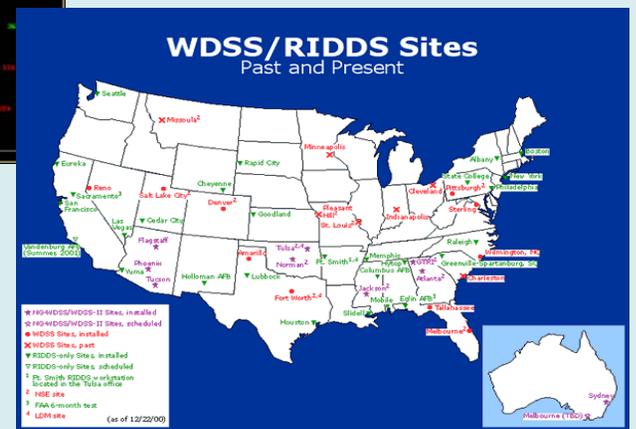

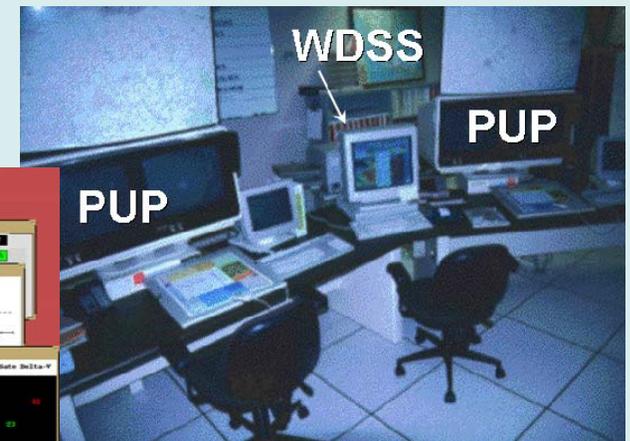

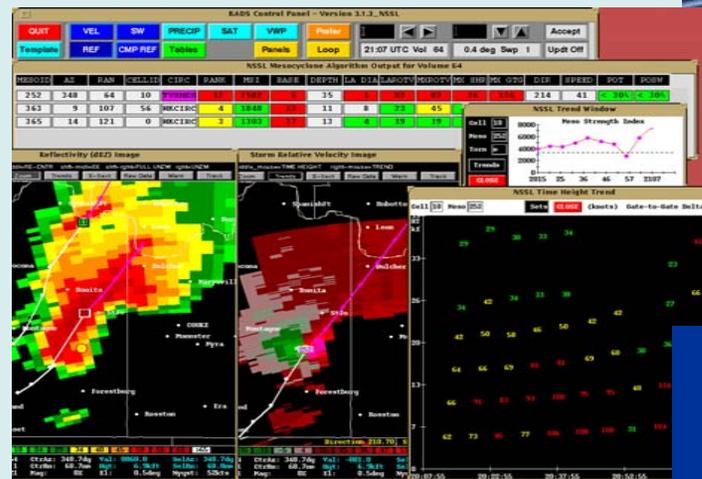

Hail Detection Algorithm (HDA)

Mesocyclone Detection Algorithm (MDA)

Tornado Detection Algorithm (TDA)

Damaging Downburst Prediction and Detection Algorithm (DDPDA)

Warning Decision Support System (WDSS)

Developers gain understanding of operational requirements

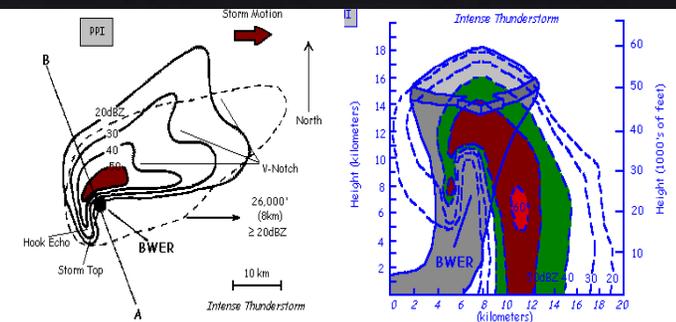

NWS users exposed to latest R&D

Feedback

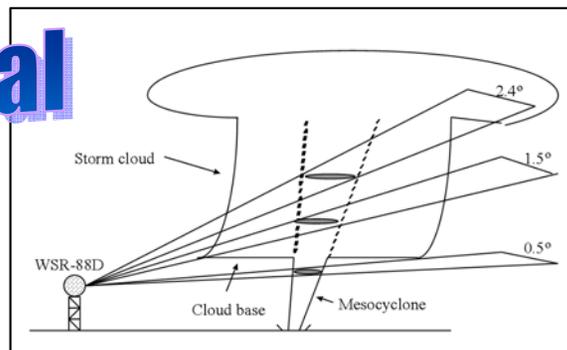

Opportunities For Improvement

Base Radar Data Analysis

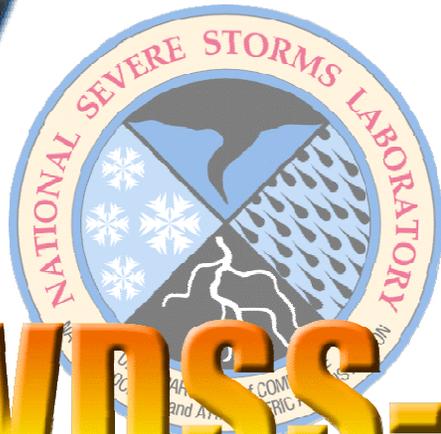

Legacy Operational Displays are 2D

Paradigm of "stacking" 2D images not meeting needs of users

Warning decision making demands rapid assessment of the 4D structure and evolution of storms

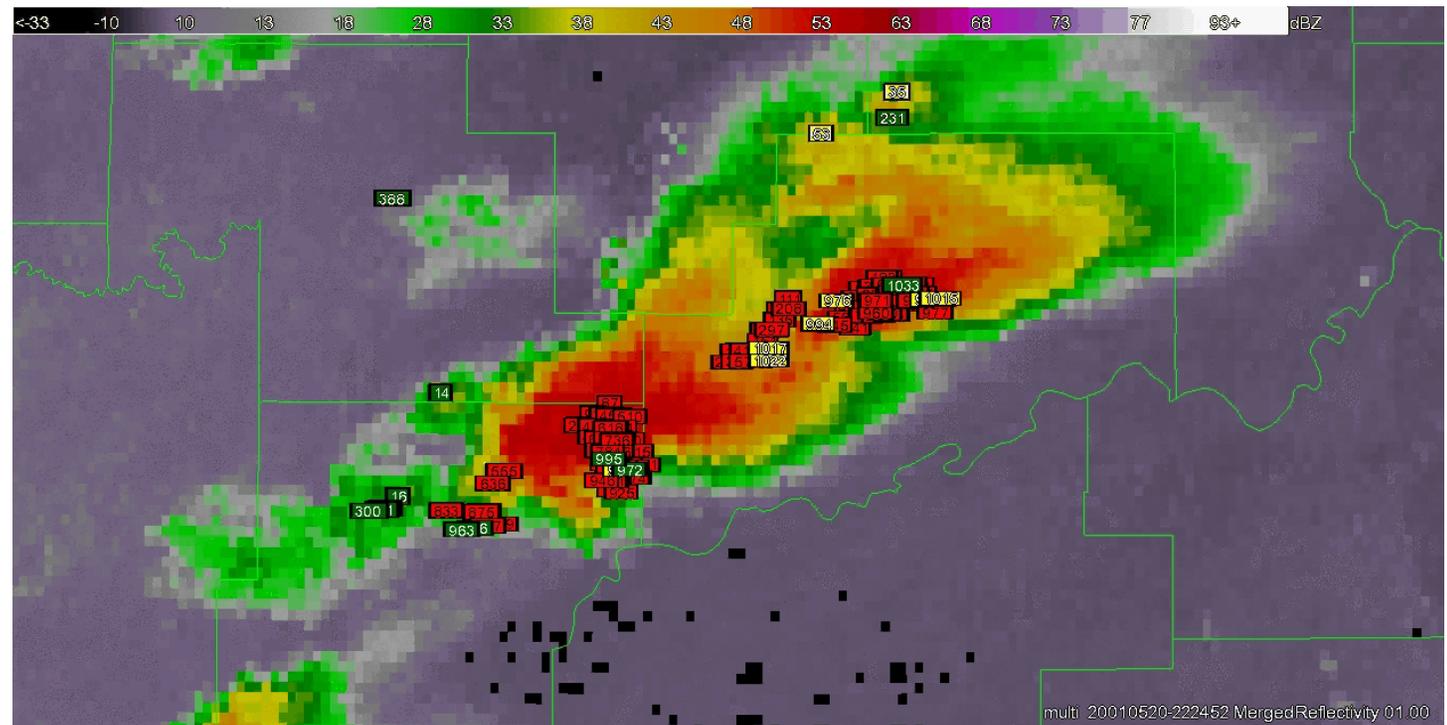

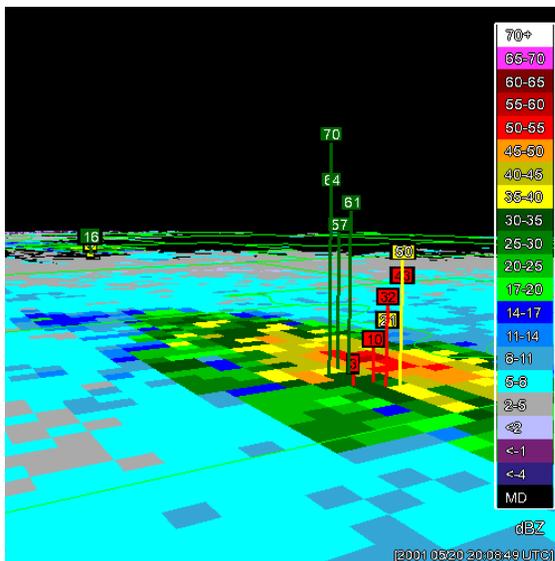

WDSS to WDSSII

WDSS-II

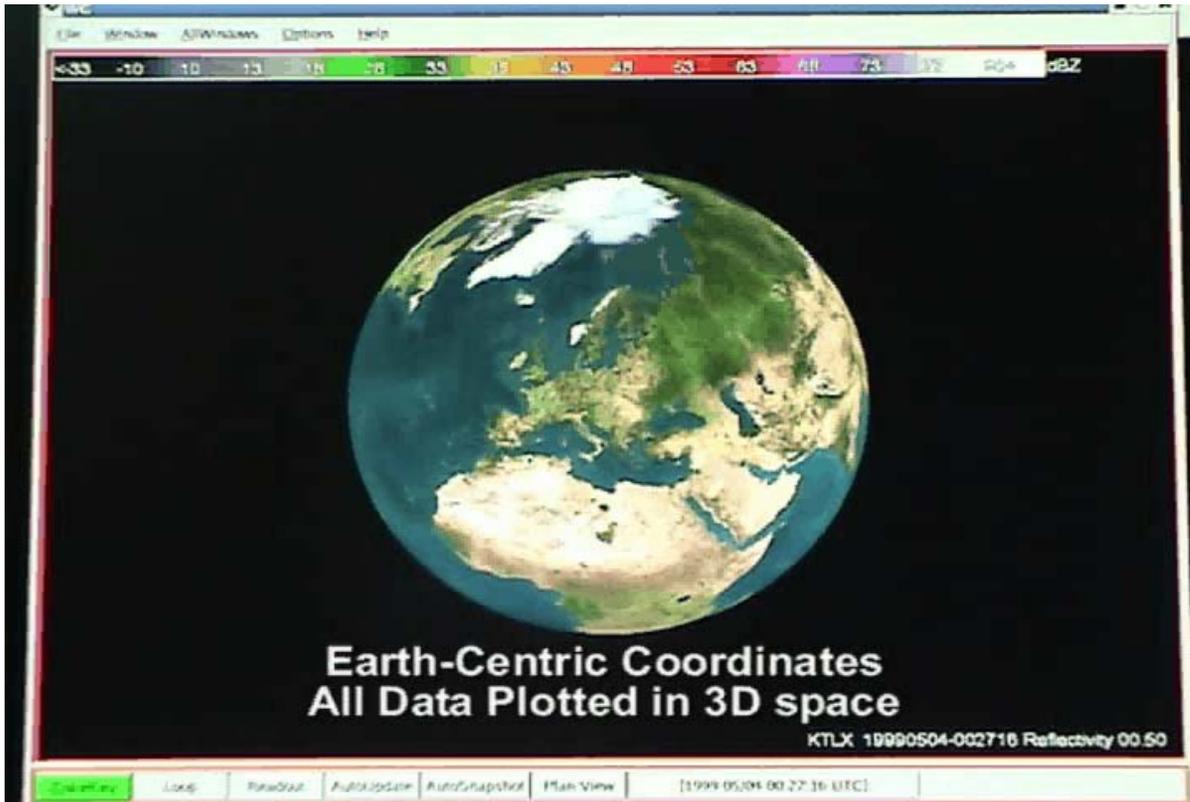

Multi-Radar/Sensor Framework

Legacy algorithm development limited by inferior 2D visualization tools

WDSSII GUI (wg) developed

WDSSII GUI (wg)

1999

Virtual Globe

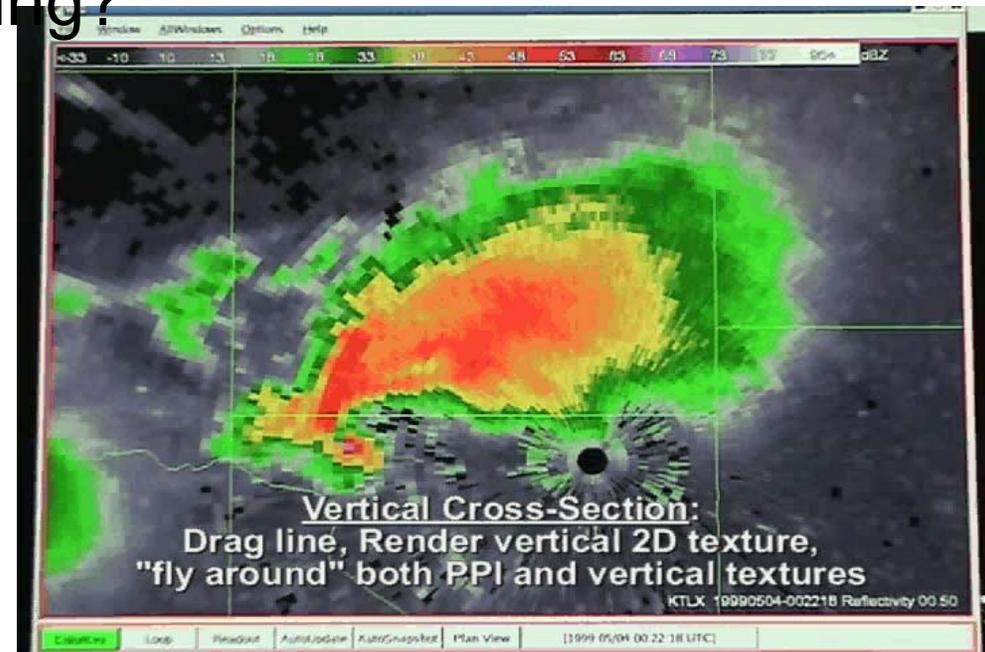

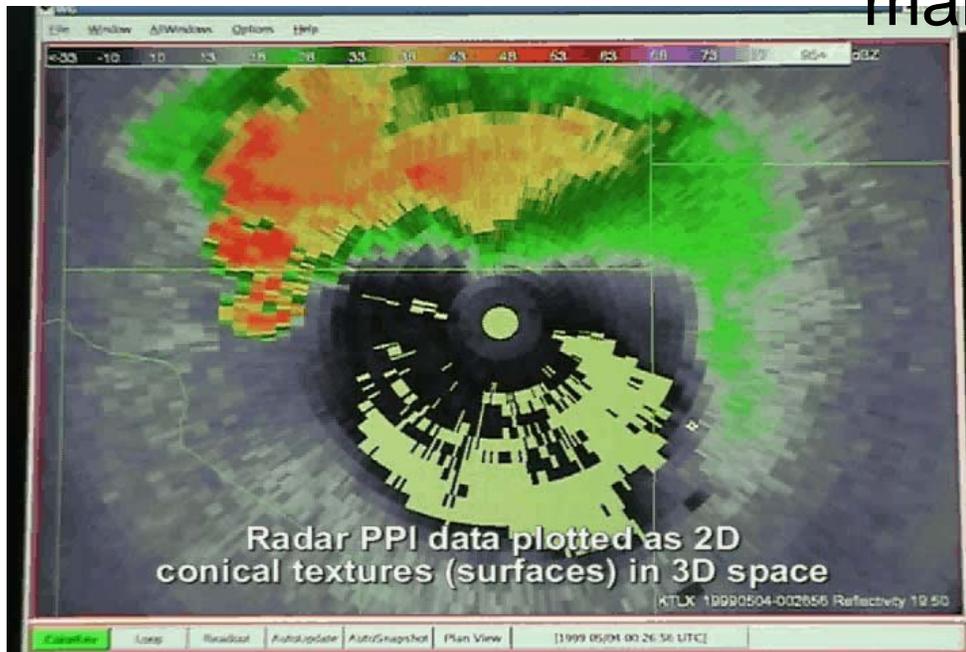

By Comparison: Earth Viewer/Google Earth

2004

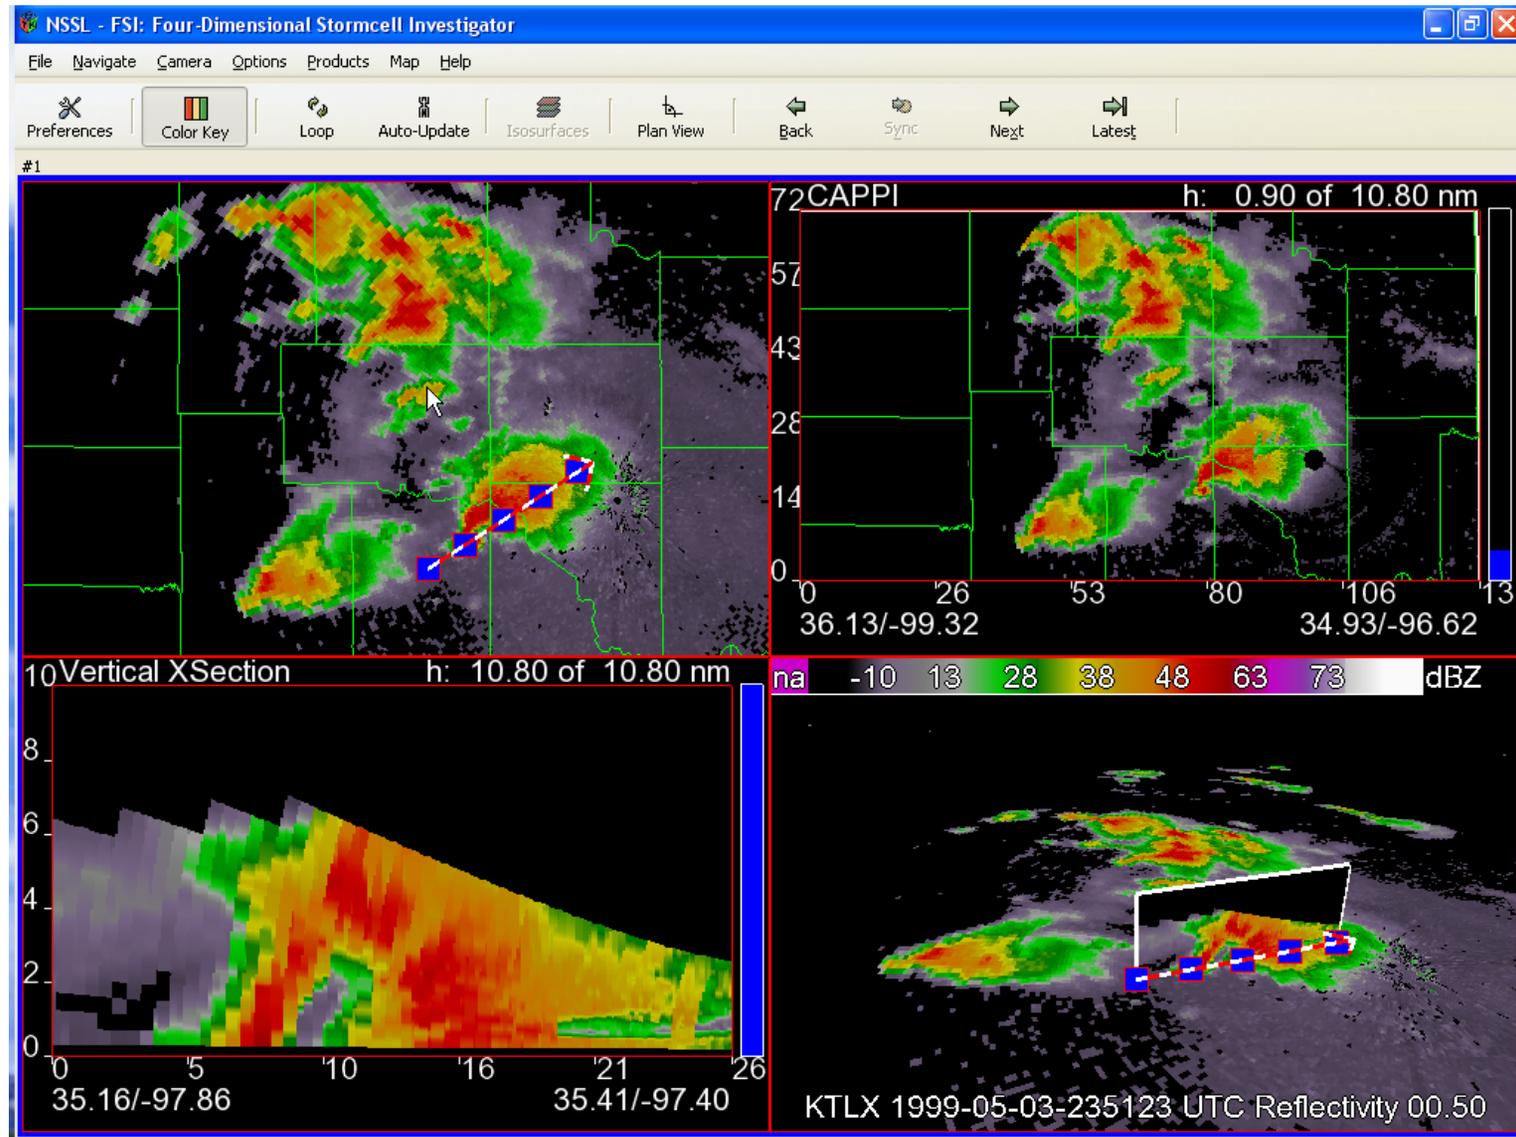

WDSSII GUI (wg)

How can we leverage/adapt 4D visualization techniques used in R&D to improve NWS operational warning decision making?

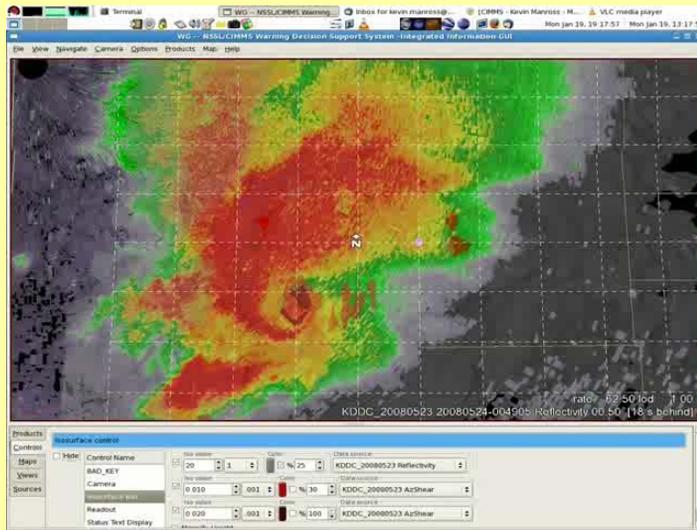

2002-2003: Field testing at NWS forecast offices

Transition to NWS Operations (2008)

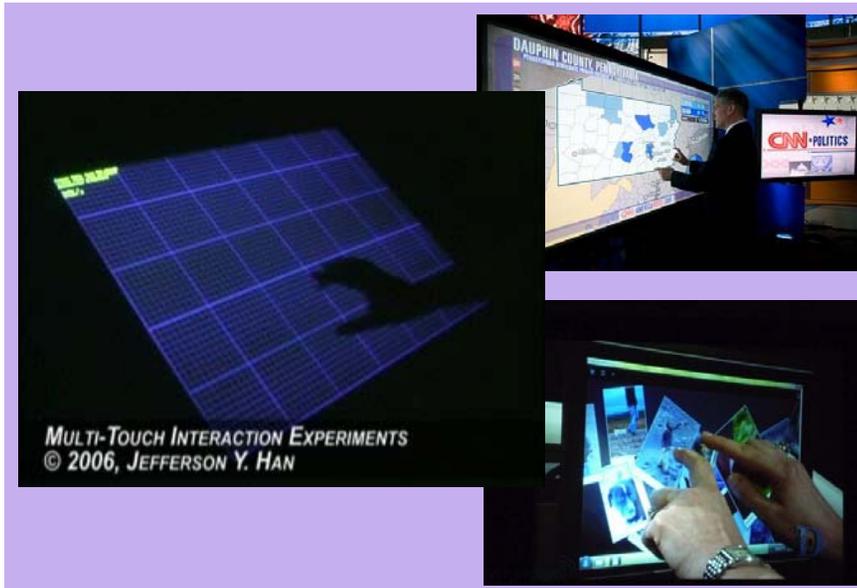

Future R&D Strategies and Challenges

Multi-parameter iso-surfaces and integrated dynamic cross-sections in the WDSSII GUI

Geo-Wall

Challenges:
Operational Technology
Early and Adult Education
Human Factors
